PRESERVING COMPANIES

The Leader in Wood Preservation

Quality Agricultural Products. From a trusted name in the industry.

- CCA, ACQ, CA-C treatments available.
- Certain products may carry a chemical manufacturer warranty. Please contact your PWP salesperson.
- Some posts do not have sufficient sapwood to absorb the required amount of wood preservative. In these situations, while some protection may be provided, products may not meet industry standards.
- EPA regulations restrict the types of products that may be treated with CCA.
- Wood intended for residential settings may not be treated with CCA.
- Wood used on farms (poles, piles, posts used as structural members, fence posts and plywood) may be treated with CCA (AWPA C16). While somewhat confusing, this means that round agricultural posts, tree stakes used commercially and posts for use in vineyards may be treated with CCA. However, sawn boards used in agricultural fencing, for example, may not be treated with CCA.
- For detailed information, go to www.epa.gov and use keyword "CCA" or contact your PWP salesperson.
