

QUALITY PRESSURE TREATED WOOD SINCE 1972

The trusted name in preservation...

Copper Naphthenate (CuNap®) Treated Wood

Quality ■ Proven Performance ■ General Use

PWP
THE PACIFIC WOOD
PRESERVING COMPANIES

The Leader in Wood Preservation

Quality CuNap[®] Treated Products. From a trusted name in the industry.

- CuNap[®] has a General Use designation by the EPA. This means it has less restrictive handling requirements and may be sold in consumer applications.
- Recent studies have demonstrated that conductivity is comparable to pentachlorophenol and creosote treated wood, which is good news for railroads and utilities alike. Please ask your salesperson for the most recent research.
- Studies show that gaff penetration in CuNap[®] poles is akin to gaff penetration in penta poles. Linemen have no difficulty climbing CuNap[®] poles.
- CuNap[®] is used to treat a variety of products including railroad ties, bridge stringers, timbers, and industrial products.
- There has never been a documented failure of any CuNap[®] treated Douglas Fir Pole. Many decades of use as a pole preservative, along with numerous research papers validate CuNap[®]'s proven performance.
- PWP has decades of experience producing quality CuNap[®] poles and other treated wood products.
